## **MINI Cooper S ECU removal/installation instructions**

**Tools needed: Fingers, shipping box and packing materials**

**If you encounter any problems during the removal please give us a call for assistance  
503-466-6463**

**Step 1:** Remove plastic Lid covering the ECU by squeezing the 2 pinch tabs

**Step 2:** Pull front and rear wire connector mechanisms(dark gray in color). As you pull these all the way out the wire harnesses simply come off. If they wire harnesses aren't coming off you haven't pulled the slide connectors fully out.

**Step 3:** Slide ECU unit out of holder.

**Step 4:** Wrap ECU in bubble wrap, pack in box and ship to the following location. Be sure to insure the package for **\$999**. This way if there is any shipping damage your covered.

Fill out the Specifications form stating the return address and the model and modifications of car. This will help insure the process happens correctly.

**Ship next day air to:**

**MINI-Madness  
2092 NW Aloclek Dr Suite 509  
Hillsboro OR 97006  
USA  
503-466-6463**

**Step 5:** To reinstall ECU simply follow these instructions in reverse.

Turn ignition 2 clicks but **don't start the car**. Wait 2 minutes with key in position 2.

Wait for the car to adjust to the new ECU settings and after 2 minutes start engine and Motor on!
